

GENDERED SPECIALISATION

WHAT IS IT?

ALL SPECIALISTS BY GENDER

It's the differing pattern of male and female career choice in medicine and surgery.

Rates of female specialists tend to be higher in less lucrative, less prestigious specialties.

MAJOR SPECIALTIES BY GENDER

WHY DOES IT MATTER?

Female students are avoiding specialties that are not perceived as welcoming to women due to a lack of female role models and their approach to parental leave or part time training.

Medical students should have equal opportunity to pursue their career aspirations, regardless of gender.
